

CURBSIDE SOLID WASTE/RECYCLE TIPS

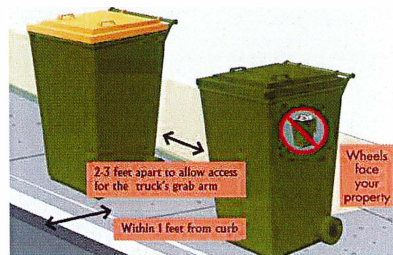

Proper cart placement helps drivers do their jobs safely and efficiently.

Here are some tips for proper cart placement:

- Place all trash/recycle in bags before placing in the carts.
- Place your trash/recycle cart out for collection the **NIGHT BEFORE** your pick-up or the **SAME DAY BY 6:30 a.m.**
- If you have overflow trash/recycle each week, please call our office to add a second cart for an additional fee.
- Give the carts some room. Whether you have one or multiple carts, you should always leave a minimum of 2-3 feet between the cart and other objects (additional carts, mailboxes, trees, etc.) Always ensure the carts are visible for the driver to see and service.
- Trash/recycle carts need to be closer to street for the truck arm to reach the can. All Waste Pro trucks use an automated arm to collect the trash/recycle carts from the curb. It is very important that the carts are not blocked by vehicles or other obstructions that can prevent the truck's arm from easily reaching the carts.
- Extra trash/recycle or other bags can not be left outside of the cart/s.
- Please **keep lids closed** on both trash/recycle carts to prevent litter from falling onto the street. If lid is not closed service **WON'T** be provided.
- Carts should be placed with handle facing your house, wheels against the curb, and lid open towards the street.

Lids closed

2-3 feet apart

no overflow of trash or recycle
